

Treatment indication, choice of agent or duration of antibiotic therapy is incorrect in 30-50% of cases.¹

Providing what matters most in infectious disease testing

Rapid detection

24 hours for pathogen detection and identification of antibiotic resistance*

Accuracy of diagnosis

99% of the most common pathogens - viral, bacterial, fungal and protozoal

Confidence in treatment

Antibiotic stewardship through reduced unnecessary exposure and the potential for fewer adverse events

Cabot Lab offers healthcare providers fast and accurate information to better inform treatment decisions

*Majority of results provided within 24 hours from receipt of specimen.
